Submitted (OCT-1995) to the EMBL/GenBank/DDBJ databases.

-!- CATALYTIC ACTIVITY: Hydrolysis of terminal non-reducing alpha-L-arabinofuranoside residues in alpha-L-arabinosides.

-!- CATALYTIC ACTIVITY: HYDROLYSIS OF 1.4 - BETA-D-XYLANS SO AS TO REMOVE SUCCESSIVE D-XYLOSE RESIDUES FROM THE NON-REDUCING TERMINI. IT ALSO HYDROLYSES XYLOBIOSE.

-!- SIMILARITY: BELONGS TO FAMILY 54 OF GLYCOSYL HYDROLASES.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Gaps

                   SUBCELLUIAN LOCATION INTEGRIAI MEMBERADE PIOCETIN.
DOMANIN: EACH OF THE FOUR INTERNAL REPEATS CONTAINS FIVE
HYDROPHOBIC TRANSMEMBRANE SEGMENTS (S1, S2, S3, S5, S6) AND ONE
POSITIVELY CHARGED TRANSMEMBRANE SEGMENT (S4). S4 SEGMENTS
PROBABLY REPRESENT THE VOLTAGE-SENSOR AND ARE CHARACTERIZED BY A
SERIES OF POSITIVELY CHARGED ANINO ACIDS AT EVERY THIRD POSITION.
DOMANIN: SINDING OF INTRACELLUIAR CALCIUM THROUGH THE EF-HAND MOTIF

Zhou J., Ontaki M., Sakurai M.;
Sequence of a cDNA encoding chicken stem cell factor.";
Gene 127:269-270(1993).
-!- FUNCTION: STIMULATES THE PROLIFERATION OF MAST CELLS. ABLE TO
AUGMENT THE PROLIFERATION OF BOTH MYELOID AND LYMPHOID
HEMATOOLETIC PROGENITORS IN BONE MARROW CULTURE. MEDIATES ALSO
CELL-CELL ADHESION. ACTS SYNERGISTICALLY WITH OTHER CYTOKINES,
PROBABLY INTERLEUKINS.
                                                                                                                                           01-FEB-1995 (Rel. 31, Created)
01-FEB-1995 (Rel. 31, Last sequence update)
16-0CT-2001 (Rel. 40, Last annotation update)
Kit Ligand precursor (C-kit Ligand) (Stem cell factor) (SCF) (Mast cell growth factor) (MGF).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  N-LINKED (GLCNAC. . .) Nature 414.865-871(2001).
-!-FUNCTION: IMPORTANY TRANSCRIPTIONAL ACTIVATOR IN THE REGULATION OF
GENES INVOIVED IN IMMURE AND INFLAMMATORY RESPONSES. SPECIFICALLY
BINDS TO AN IL-1 RESPONSE ELEMENT IN THE IL-6 GENE. NF-IL6 ALSO
BINDS TO REGULATORY RECIONS OF SYPERAL ACUTE-PHASE AND CYTOKINES
GENES. IT PROBABLY PLAYS A ROLE IN THE REGULATION OF ACUTE-PHASE
REACTION, INFLAMMATION AND HEMOPOTESIS. THE CONSENSUS RECOGNITION
-!- SUBUNIT: BINDS DAN AS A DIMER AND CAN FORM STABLE HETERODIMERS
WITH CYEBP ALPHA, DELTA AND GAMMA.
-!- SUBCELLUIAR LOCATION: NUClear.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     NOTICE: This sequence may not represent the entire insert of this clone. It may be shorter because we only sequence overlapping clone sections once, or longer because we provide a small overlap between neighboring data submissions.
                                                                                                                                                                                                                                                                                                                                                                                                                                                   Eukaryota, Metazoa; Chordata; Craniata; Vertebrata; Euteleostomi; Mammalia; Eutheria; Primates; Catarrhini; Hominidae; Homo. 1 (bases 1 to 55713)

```

This sequence was finished as follows unless otherwise noted: all regions were double stranded, sequenced with an alternate chemistry, or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats, all regions were covered by sequence from more than one subclone; and the assembly was confirmed by MAPPING INFORMATION:

Mapping information for this clone was provided by Dr. John D. Warbhrson, Department of Genetics, Washington University, St. Louis MO. For additional information about the map position of this sequence, see http://genome.wustl.edu/gsc

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         * NOTE: Estimated insert size may differ from sequence length

* (see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html).

* NOTE: This is a 'working draft' sequence. It currently

* consists of 24 contigs. The true order of the pieces

* consists of 24 contigs. The true order of the pieces

* is not known and their order in this sequence record is

* arbitrary. Gaps between the contigs are represented as

* runs of N, but the exact sizes of the gaps are unknown.

* This record will be updated with the finished sequence

* as soon as it is available and the accession number will

* be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Direct Submission

It currently consists of 25 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.

on Aug 11, 2002 this sequence version replaced gi:21530913.

During sequence assembly data is compared from overlapping clones.

Where differences are found these are annotated as variations together with a note of the overlapping clone name. Note that the variation annotation may not be found in the sequence submission corresponding to the overlapping clone, as we submit sequences with sequence was finished as follows unless otherwise noted: all regions were either double-stranded or sequenced with an alternate chemistry or covered by high quality data (i.e. phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by at least assembly was confirmed by restriction digest. The following abbreviations are used to associate primary accession numbers given in the feature table with their source databases: Em: EMBL; Sw:, SWISSPROT; Tr:, TREMEL; WP:, MORMPEP; Information on the WORMPEP database can be found at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            http://www.sanger.ac.uk/Projects/C_elegans/wormpep This sequence was generated from part of bacterial clone contigs of human chromosome 1, constructed by the Sanger Centre Chromosome 1 Mapping

The invention relates to compound that competitively inhibits binding of competence signal peptide (CSP) to Streptococcus mutans histidine kinase (HK). Compounds of the invention are useful for treating or prophylaxis of caries or endocaditis. Vector comprising nucleic acid encoding S. mutans CSP is useful for producing recombinant host cell capable of expressing it. The recombinant host cell produced by the method is useful for expressing opeptide in culture. S. mutans CSP DNA is useful for identifying nucleic acid molecules encoding CSP activated peptide. It is also useful as probes and in assays to identify and molecules. It is also useful for preparing vaccines for preventing or treating the above mentioned conditions. Antibodies against CSP activity for screening organisms or tissues containing CSP peptide or CSP-like peptide and for immnopurifying the peptides. The antibodies are also useful for preventing caries. The antibodies are also useful competence is S. mutans CSP DNA.
                                                                                                                                                                                                                                                                                                                                            Novel compound that inhibits binding of competence signal peptide of Streptococcus mutans to S. mutans histidine kinase, useful for treating or preventing caries or endocarditis

The invention relates to a compound that competitively inhibits the binding of competence signal peptide (CSP) to Streptococcus mutans confiding kinase (HK). Compounds of the invention are useful in medical treatment or prophlaxis of caries or endocarditis. They are useful for inhibiting or disrupting microbial biofilms involved in infections in man and animals and in biofouling of surfaces susceptible to microbial accumulation. They are also useful for treatment or prophylaxis of a disease, disorder or abnormal physical state caused by S. mutans. Pharmaceutical composition containing the compounds of the invention is useful for treating diseases caused by streptococcal infections. Polymucleotides encoding S. mutans CSP are useful as probes or in assays to identify antagonists or inhibitors of CSP peptides. They are also used for preparing autibodies, for vitro analysis of HK, CSP or are useful for preparing antibodies, for vitro analysis of the invention are useful for preparing antibodies, for vitro analysis of compounds to inhibit and/or enhance polypeptide or providing protection against carles, to screen organisms or tissues containing CSP peptide or CSP-like peptides, for immuno-purification of CSP or CSP or CSP-like peptides from crude extracts, and to detect CSP or a similar peptide. The present sequence is S. mutans CSP DNA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               el compound that competitively inhibits binding of competence signal bilde to Streptococcus mutans histidine kinase, useful in treatment prophylaxis of caries or endocarditis -
                                                                                                                                                                                                        "CDS does not include start and stop codon"

The invention relates to compound that competitively inhibits binding of competence signal peptide (CSP) to Streptococcus mutans histidine kinase (HK). Compounds of the invention are useful for treading or prophylaxis of caries or endocarditis. Vector comprising nucleic acid encoding S. mutans CSP is useful for producing recombinant host cell capable of expressing it. The recombinant host cell produced by the method is useful for expressing peptide in culture. S. mutans CSP DNA is useful for identifying nucleic acid molecules encoding CSP activated peptide. It is also useful as probes and in assays to identify antagonists or inhibitors of the peptides produced by the nucleic acid molecules. It is also useful for preparing vaccines for preventing or treating the above mentioned conditions. Antibodies against CSP activity are also useful for preventing caries. The antibodies against CSP activity are also useful for preventing caries. The antibodies are also useful for preventing caries. The antibodies acid in assays for genetic competence. The present sequence is S. mutans comC CSP precursor gene.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Novel compound that inhibits binding of competence signal peptide of Streptococcus mutans to S. mutans histidine Kinase, useful for treating or preventing caries or endocarditis

binding of competence signal peptide (CSP) to Streptococcus mutans histidine kinase (HK). Compounds of the invention are useful in medical treatment or prophylaxis of caries or endocarditis. They are useful for inhibiting or disrupting microbial biofilms involved in infections in man and animals and in biofouling of surfaces susceptible to microbial accumulation. They are also useful for treatment or prophylaxis of a disease, disorder or abnormal physical state caused by S. mutans. Pharmaceutical composition containing the compounds of the invention is useful for treating diseases caused by streptococcal infections. Polynucleotides encoding S. mutans CSP are useful as probes or in assays to identify antagonists or imhibitors of CSP peptides.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Novel compound that competitively inhibits binding of competence signal peptide to Streptococcus mutans histidine kinase, useful in treatment or prophylaxis of caries or endocarditis _{\rm i} -
                                                                                                                                 The invention relates to a compound that competitively inhibits the

    They are also used for preparing vaccines. Polypeptides of the invention are useful for preparing antibodies, for vitro analysis of HK, CSP or RR activity or structure, and in assays for the identification and developments of compounds to inhibit and/or enhance polypeptide or providing function directly. Antibodies of the invention are useful for providing protection against caries, to screen organisms or tissues containing CSP peptide or CSP-like peptides or CSP-like peptides. For immuno-purification of SSP or CSP-like peptides from crude extracts, and to detect CSP or a similar peptide. The present sequence is S. mutans ComC gene encoding a

of competence signal peptide (CSP) to Streptococcus mutans histidine kinase (HK). Compounds of the invention are useful for treating or encoding S. mutans CSP is useful for producing recombinant host call capable of expressing it. The recombinant host call produced by the method is useful for expressing peptide in culture. S. mutans CSP DNA is useful for expressing peptide in culture. S. mutans CSP DNA is useful for identifying nucleic acid molecules encoding CSP activated peptide. It is also useful for preparing vaccines for preventing antagonists or inhibitors of the peptides produced by the nucleic acid molecules. It is also useful for preparing vaccines for preventing or treating the above mentioned conditions. Antibodies against CSP activity are also useful for preparing containing CSP peptide or CSP-like for screening organisms or itssues containing CSP peptide or CSP-like peptide and for immunopurifying the peptides. The CSP mutans acid
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Novel compound that inhibits binding of competence signal peptide of Streptococcus mutans to S. mutans histidine kinase, useful for treating or preventing caries or endocarditis -

The invention relates to a compound that competitively inhibits the binding of competence signal peptide (CSP) to Streptococcus mutans histidine Kinase (HK). Compounds of the invention are useful in medical treatment or prophylaxis of caries or endocarditis. They are useful for inhibiting or disrupting microbial biofilms involved in infections in man and animals and in biofouling of surfaces susceptible to microbial accumulation. They are also 'useful for treatment or prophylaxis of a disease, disorder or abnormal physical state caused by S. mutans. Pharmaceutical composition containing the compounds of the invention is useful for treating diseases caused by streptococcal infections. Polynucleotides encoding S. mutans CSP are useful as probes or in assays to identify antagonists or inhibitors of CSP peptides. They are also used for preparing vaccines, Polypeptides of the invention are useful for preparing antibodies, for vitro analysis of HK, CSP or RR activity or structure, and in assays for the invention are useful for peptide function directly. Antibodies of the invention are useful for peptide function against caries, to screen organisms or tissues containing CSP peptides or ontaining CSP peptides or or containing CSP peptides from crude extracts, and to detect CSP or a similar peptide. The present sequence is S. mutans comCDE gene local
                                                                                                                                                                                                                     Novel compound that competitively inhibit's binding of competence signal peptide to Streptococcus mutans histidine kinase, useful in treatment or prophylaxis of caries or endocarditis;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      exon
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       exon
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  exon
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          exon
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            exon
                                                                                                                                                                                         RESULT 8
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     This genomic clone encodes the pulmonary hydrophobic surfactant-associated protein SAP(Phe). Following processing to remove the introns the prod. is obtd. in a high yield. When SAP(Phe) is combined with a lipid it can be used to reduce or maintain normal pulmonary surface tension in the alveoli of animals (sp. humans) and therefore can be used in the treatment of hyaline membrane disease in premature infants. May also be used to deliver substances to respiratory epithelial cells. See also AARB0572-96, AARB0613, AARB0615, AARB0617 and AARB0412-13. (Updated on 03-OCT-2002 to add missing OS field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Pulmonary hydrophobic surfactant-associated proteins - useful for normalising pulmonary surface tension.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Seguence 10475 BP; 2416 A; 3063 C; 2940 G; 2056 T; 0 other;

                                                                                                                                                                   The sequence is derived from human embryonic kidney cell genomic library. SAP (Val) and SAP (Phe), when combined with lipids, have significant pulmonary biophysical surfactant activity that may be utilised to treat and prevent hyaline membrane disease (HMD) and other syndromes associated with lack or insufficient amts. of natural pulmonary surfactant material. Antibodies and antisera may also be made which are directed against SAP (Val) or SAP (Phe).

SAP (Val) and SAP (Phe) in body fluids may be assayed using the compsns.
